

## Sorbothane Shock Stopper Full Strike Insoles

Model : sorbo full

Manufacturer : Sorbothane

Sorbothane is a unique synthetic material which mimics the characteristics of human flesh.

Its molecular structure allows it to recover its shape completely after each 'shock' and, used as an insole in footwear, it absorbs 94.7% of the shock waves caused by walking or running on hard surfaces. That means it reduces muscle fatigue, helps protect weak joints and eases the strains on ligaments and tendons.
